Contracor Blasting Machines, Accessories And Spares

Built to exacting German engineering standards the Contracor range of products offer both high performance levels, reliability and come to you at a very competitive price.

The range is based around either the 100 or 200ltr pressure pot blasting system with various options on the types of air control and media supply vales.

All the units come as standard fitted with a CAF 3 moisture separation trap for the protection of both the blast media and internal parts of the system giving the units a long lease of life even when used with compressed air of a lower quality.

These units are also fully supported with a wide range of spares and accessories ranging from Personal protective equipment, blast nozzles and associated equipment.

PPE. 2 available types of air fed masks the "Comfort and Panorama", air breathing filters and conditioners, blasting overalls, gloves etc.

NOZZLES . Including Tungsten Carbide and Boron lined conventional single venturi types and the inovative double venturi units along side the more specialised combined wet blasting and angle firing nozzles.

ASSOCIATED EQUIPMENT. Including brass and nylon quick change couplings, blast nozzle holders. Blast, twin control and air feed breathing hoses, pipe connectors and even a stainless steel pneumatically operated water pump for converting the blast units for use on aqueous applications.
