Description

The JLS heavy duty industrial 300°C Gas fired air circulated tunnel oven is one of a pair offering a total length of 11mtrs as a combined unit. The burners are currently set to operate on propane but can be easily converted back to operate on natural gas. The air circulation is provided by 2 x 2.2kW roof mounted fans to offer a uniform temperature within the chamber. The design of these robust ovens means that they are readily lend themselves to have doors fitted at either or just one end and as such can be used as singular long section box ovens.
