### Description

This pre owned JWE 3 gallon Centrifugal Dryer is suitable for small parts being processed in bulk. Due to the close proximity of the parts and resistance they offer to free air flow, these applications often present challenges to normal convection dryers.

Centrifugal drying overcomes those obstacles and speeds production by drying two ways. Centrifugal force from the spinning action of the basket "throws off" excess water, oils, or other liquids. At the same time, a turbine fan mounted below the basket creates a powerful suction that pulls heated air through the parts load for added drying power. This

double-drying action assures fast drying and reduces the scarring and marring frequently responsible for costly rejects. In most cases, producing spot-free, moisture-free parts in under 60 seconds

Load capacity 45kg max.

Work basket Ø450 x 300mm deep.

Interlocked braked motor via lid sensor, actuated on opening.
