# SHOT BLASTING

## Riley 'AirTech' Container Shot Blast Rooms With Cartridge Filter Dust Extraction System

Riley 'AirTech' container shot blast rooms are a robust, energy-efficient and low cost solution for all forms of enclosed, free-standing shot blasting operations.

Applications include vehicle chassis remanufacturing, small scale workshop manufacturing and the pre-treatment of many types of products before surface finishing, powder coating or painting.

The unit structure is based on a standard 6 metres (20 feet) shipping container that has been fully equipped for use as a working shot blast enclosure.

### Main features include:

- Abrasive resistant rubber lined chamber
- Impact resistant internal lighting
- Side personnel entry door
- Double end loading access doors
- Integral dust extraction unit
- 3mm thick steel internal reinforced floor and doors

Riley 'AirTech' container shot blast rooms can be used with any stand alone pressure pot blasting equipment. The combination of the fully enclosed blast chamber and inbuilt extraction system enables all of the blast media and waste contaminates to be held efficiently within the chamber, resulting in an environmentally friendly and economical shot blasting operation that can be readily installed anywhere within your manufacturing facility.

In combination with the exclusive Riley Contracor abrasive blasting equipment range, Riley 'AirTech' container shot blast rooms provide the complete, pressure pot blasting solution.
